

We could include some form of weight sensor that can communicate with the black box for the identification of the software development section.

#### Initial presentation critiques

- She doesn't care about the fancy animations right now
- She appreciates the minimalist approach, but typically these types of presentations are 100's of slides it could get overwhelming to the board reviewing it. (Initial gut reaction)
- We should be able to make the powerpoint pretty for a presentation handout
- Peer critique: Some of the slides they say have a lot of text and may be hard for the evaluators to stay focused on listening to us since they will be reading the slide instead of listening.
- Slide 1: We want a title, and a tag line for the solution we are working towards. Evaluators hate it if they don't know our solution from the very first slide.
- Slide 2: The logo is very cool.
- Slide 5-7: Starting off with who is on our team is a good point
- Slide 5-7: As we move forward we could possibly add in titles into the team portion of the presentation as we claim specific roles on the team.
- Slide 4-7 ( or every section) : We could possibly add the titles to the slide sections to the specific slides instead of them being their individual slides.
- Slide 9: Possibly reword the first sentence to 78.3% of all americans move themselves
- Slide 9: Expects there to be a footer. Should be the date and the purpose of the class. Maybe the product name / feasibility presentation.
- Slide 9: Apostrophe and contraction is not formal, don't use don'ts.
- Slide 11: She likes that the source is in the bottom instead of scripted as a number at the bottom.
- Slide 11: One of the evaluators super quick to load references and critique where we draw the data from so we could examine our sources more thoroughly(?)
- Slide 17-18: We have two colors on the diagram but no legend. If the colors don't have a significance and thus don't need a legend she doesn't like the colors.
- Slide 17-18: She appreciates the different shapes and what they mean.
- Slide 17-18: She likes that the decision box has a yes and no path.
- Slide 17-18: Orange line is bizarre.
- Slide 17-18: We could break the diagram into different slides and emphasize which part is being focused on in this slide by possibly increasing the size of the respective box to draw user attention as we do each process by itself.
- Slide 20: She mentioned how the color of this diagram is similar to the former one so without a legend it might confuse someone viewing the presentation.
- Overall: She thinks its reasonable and likes it overall so far.
